

ROHAN MONDAL

Software Developer

+91 8074520620 | rohan21388@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Motivated Software Developer with hands-on experience building AI-powered applications, full-stack mobile apps, and REST API-integrated platforms. Proficient in Python, JavaScript, Flutter, and MongoDB, with a strong foundation in AI/ML fundamentals and problem-solving. Seeking a Software Developer Intern role to contribute clean, efficient, and scalable code while collaborating with cross-functional engineering teams.

EDUCATION

Bachelor of Technology — Artificial Intelligence & Machine Learning

CGPA: 8.0 / 10.0

Scient Institution of Technology | 2024 – 2028

SOFTWARE PROJECTS

- EduMate – College Management Mobile App [github link](#) 05/2026
- Designed and developed a cross-platform mobile application using Flutter, MongoDB Atlas, and Firebase, successfully tested with 15+ student users to streamline college administration workflows.
- Engineered and debugged 5 production-ready features — attendance tracking, timetable management, study material uploads, push announcements, and role-based dashboards — using reusable, modular architecture.
 - Maintained codebase using Git and GitHub with structured version control across all sprints; conducted peer code reviews to ensure code quality.
- InterviewX – AI-Powered Interview Preparation Platform [githublink](#) 03/2026
- Architected and deployed an AI-driven platform generating role-specific interview questions across 4 domains (DSA, System Design, Behavioural, Core CS) for structured technical interview practice.
 - Integrated a REST API-based evaluation engine that scores answers and identifies knowledge gaps, cutting unstructured preparation time for candidates.
 - Authored clean, modular Python code following best practices; performed end-to-end testing and debugging across all user flows.
- HealthCare Assistant – AI Symptom Checker [githublink](#) 01/2025
- Built a conversational AI assistant integrating an LLM REST API to map symptom inputs to 15+ medical conditions with severity ratings and next steps.
 - Eliminated the need for medical terminology via NLP-driven input processing, increasing accessibility for non-expert users.
 - Improved AI response accuracy through iterative prompt engineering; added confidence-scoring and disclaimer layers for responsible use.

SKILLS

Frontend & Backend			
HTML	CSS	JavaScript	React.js
Node.js	Express.js	REST APIs	Firebase
Mobile & Databases			
Flutter	Android Studio	Dart	MongoDB
MongoDB Atlas	SQL	Firebase Firestore	
Tools & Concepts			
Git	GitHub	VS Code	Postman
AI/ML Fundamentals	OOP	REST API Design	
Debugging	Code Reviews	Agile Collaboration	

CERTIFICATIONS & ACHIEVEMENTS

- IEEE Student Member — active in technical chapter events and peer collaboration.
- AI Tools Workshop — trained in prompt engineering, AI-assisted development, and automation.
- Forge Inspire Hackathon — built and presented a working prototype under time constraints.
